THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. ## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Stephen Scanlon on May 6, 2010.

2. The application has been amended as follows:

In the Claims

Claim 1 has been rewritten as follows:

--1. (Currently amended) A cutter for a web which comprises:

a web transport system that operates to intermittently and cyclically [[to]] advance a [[the]] web, the web transport system providing a synchronization signal at a known point of its operation in a cutting cycle that corresponds to a point when the web is stopped and ready for cutting;

a drive system coupled to a cutting knife, the drive system oscillating the cutting knife from a resting position to an active position and back to the resting position in response to an actuating signal;

a sensor in the path of the cutting knife, the sensor providing a position signal when the cutting knife is at a predetermined position that is substantially different than the resting position; and

a controller coupled to the web transport system, the drive system, and the sensor, the controller further comprising

a synchronization circuit to receive the synchronization signal from the web transport system;

an actuating circuit to provide the actuating signal to the drive system;

a position sensing circuit to receive the position signal from the sensor;

and

an adjusting circuit coupled to the synchronization circuit, the position sensing circuit, and the actuating circuit, the adjusting circuit capable of automatically adjusting the timing between the synchronization signal and the actuating signal based on the timing between the previous synchronization signal and the corresponding previous position signal to cause causing the actuating circuit to provide subsequent actuating signals so that the cutting knife arrives at the predetermined position at a predetermined time relative to the corresponding synchronization signal.--.

In the Specification

Paragraph 0031, line 1, --second-- has been inserted before "motor 36".

Remarks

3. The above changes to claim 1 were made to further clarify the claimed invention.

**Reasons for Allowance**

4. The following is an examiner's statement of reasons for allowance:

The prior art of record, either taken alone or in combination, does not teach or fairly suggest the claimed invention. For example, the prior art of record does not teach or suggest a cutter having the web transport system as claimed, the claimed drive system coupled to the cutting knife as claimed, the sensor as claimed in combination with the controller, wherein the controller comprises the circuits as claimed.

For example, Roess, pn 3,178,974, discloses a controller, arguably of a web cutter, that includes a synchronization circuit (e.g., 75) that receives a synchronization signal from a web transport system (e.g., 10, 113, 76, 77, 81, 82); an actuating circuit (e.g., 85) that provides an actuating signal to a drive system (e.g., 14) to cause the drive system to oscillate a cutting knife (e.g., 15); a position sensing circuit (e.g., 88) that receives a position signal from a sensor (e.g., 86, 92) when the cutting knife is at a predetermined position that is substantially different from the resting position; and an adjusting circuit (e.g., 74, 115, 89, 104, 99, 41, 40, and the connections therebetween) that causes the actuating circuit to provide subsequent actuating signals so that the cutting knife arrives at the predetermined position at a predetermined time relative to the synchronization signal. However, Roess '974 does not teach or suggest an adjusting circuit that is capable of adjusting the timing between the synchronization signal and the

actuating signal based on the timing between the synchronization signal and the position signal to cause the actuating circuit to provide subsequent actuating signals so that the cutting knife arrives at the predetermined position at a predetermined time relative to the corresponding synchronization signal. Further, the prior art of record, taken as a whole, does not suggest such an adjusting circuit.

As another example, Martin et al., PG Pub. No. 2004/0069105, discloses a controller that includes a synchronization circuit (e.g., from 64) that receives a synchronization signal from a web transport system (e.g., 38, 40, 44); a position sensing circuit (e.g., from 62) that receives a position signal from a sensor (e.g., 62 as well as the structure suggested in paragraph 0032) when the cutting knife is at a predetermined position that is substantially different from the resting position; and an adjusting circuit (e.g., see paragraph 0031). However, Martin '105 does not teach or suggest an actuating circuit for providing an actuating signal to the drive system of the cutting knife, and thus lacks an adjusting circuit that is capable of adjusting the timing between the synchronization signal and the actuating signal of the drive system of the cutting knife.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
